SUMMARY

Backend-focused computer science student at VIT Chennai (CGPA 8.46) with hands-on experience designing and deploying RESTful APIs using FastAPI and Express, applying object-oriented design principles, and working across SQL and NoSQL databases. Proven ability to write tested, production-ready code with Pytest and CI/CD-integrated pre-commit pipelines. National Semi-Finalist, Flipkart GRID 7.0.

EDUCATION

Vellore Institute of Technology, Chennai

BTech in Computer Science

CGPA: 8.46/10 (Till 5th Sem) — Aug 2023 - Present

SKILLS

Backend	FastAPI, Express, RESTful API Design, JWT / OAuth 2.0
Databases	MySQL, PostgreSQL, MongoDB, Supabase
Core CS	Data Structures & Algorithms, Object Oriented Design
Machine Learning	ML algorithms, Tensorflow and PyTorch, Data Preprocessing
DevOps & Cloud	Docker, Nginx, Vercel, Git, GitHub
Testing	Pytest, unittest

EXPERIENCE

AI/ML Immersion Program Participant — National University of Singapore — *Dec 2025*
github.com/deepfake-model 

Designed and trained a ViT-CNN ensemble model for binary deepfake detection using PyTorch, leveraging ViT for global feature capture and CNN for local precision, achieving 79% classification accuracy through hyperparameter tuning and cross-validation.

PROJECTS

Google OAuth Sign-In Tracker May 2026 - June 2026 [application](#) 

- Built a production-deployed RESTful API service using FastAPI to track per-user sign-in frequency, enforcing rate limiting and session persistence via HttpOnly cookies.
- Implemented Google OAuth 2.0 authentication with single-origin CORS enforcement, reducing unauthenticated API surface to zero; deployed to Vercel with environment-based config management.
- Achieved full unit test coverage using Pytest, with automated test runs validating auth flows and session edge cases across deployment environments.

Full-Stack Project Management System Jan 2026 - March 2026 github.com/mini-jira 

- Designed and built a RESTful API backend using Node.js and Express.js following MVC architecture and object-oriented design principles, exposing 8 endpoints validated end-to-end with Postman.
- Implemented JWT-based authentication middleware for stateless session handling, securing all protected routes against unauthorized access.
- Built a CI/CD-ready quality pipeline using pre-commit hooks with unit, integration, and mutation testing — maintaining stable test coverage across the full development lifecycle.

CERTIFICATIONS

Generative AI using IBM WatsonX – IBM

ACHIEVEMENTS

- **National Semi-Finalist in 2025 Flipkart GRID 7.0** - Ranked among top teams out of 1,60,000+ participants nationwide, solving problems in data structures and algorithmic optimization.
